www.goClickfree.com

NDA Fact Sheet -- Under embargo until Nov. 17, 2008

Review Unit Availability: Week of Nov. 24

Sales Availability: Week of Nov. 24

Price: \$159.99

Overview

With the Clickfree Portable Backup, protecting valuable information on a computer has never been easier. Existing backup drives, including those from the leading “single-touch” device manufacturers, require complex setup even before the first backup can be completed. This means software installation, system reboots, hardware set up and software configuration. In addition to taking a long time to set up, these products require the user to learn new, confusing terminology. With Clickfree, all of these complexities are removed. To run the backup, simply remove the device from the box and connect it to a computer – that’s it. The backup automatically starts by itself and backs up files without any user interaction.

Description

- With a capacity of 250GB, the HD225 provides enough storage for:
 - 55,000 songs
 - 100,000 photos
 - or 500,000 digital documents
- It automatically backs up more than 350 different file types, including all Word files, PowerPoint, email files, attachments within emails, photos, movies, music files. It even finds preferences, favorite websites and browser lists.
- One device can back up 15 PCs, as it will compartmentalize each PC’s data.
- It provides incremental backup; upon first time use it will automatically find all of the files and copy them to the hard drive. Each time after that, it will only back up the new files. (It does not synchronize files with the PC. This feature is not important for our target audience. In fact, it protects our customers’ data in case they erroneously delete or change a file inadvertently.)
- While the software’s default settings will probably be sufficient for most users, it is user-modifiable, giving users full control over their backups. Even after the settings have been changed, the backup will still run without any interaction or installation.
- If a computer crashes, plug in the HD225, hit the “restore” button, and it will bring the data back into its original folder locations again.

Target Markets

Today, 85% of the population does no back up at all (DeLoitte & Touche, 2007)

- General consumers
 - Family photos and video, scrap booking images
 - Financial data; Quicken files, tax records, etc.
 - Student homework/research data

- more -

- Business professionals
 - It can be used by employees with little computer knowledge as well as IT professionals.
 - It's ideal for small businesses without dedicated IT resources.
 - It allows field reps and other off site workers to back up their laptops or home computers (that contain work files) on a regular basis, without requiring IT help/resources.
 - It provides a repository for the most up-to-date data to reside during lapses in network-based back up.
 - If an employee's computer crashes, they can instantly restore their data themselves by pushing the "restore" button – no need for remote or on-site IT assistance.
- IT managers
 - Inexpensive and easy to use, it saves IT professionals time and money.
 - The software is configurable and can be customized to back up to certain file extensions (such as proprietary software, or only certain folders.)

Technical Specs

Clickfree Portable Backup HD225	
Hard Drive	2.5 inch SATA
Capacity	250GB
RPM	5400
Cache Buffer	8MB
Interface	USB 2.0 and 1.1 compliant
